OPEN HEALTH

FIRST HEALTH INFORMATION SYSTEM

WITH AN OPEN SOURCE CODE AND FREE SOFTWARE LICENSE - GPL V3

01 Relevance

90% of health information systems in Ukraine are overpriced and inconvenient for medical practitioners

We offer a simple and cheap product that will be available to individual entrepreneurs and small businesses

02 Innovations

Open source

The first medical information system in Ukraine and the world with open source code and open license GPL version 3

Cloud technologies

24/7 access from any device with maximum security

Integration with EHEALTH

Work with the electronic health care system is as convenient as possible

Intuitive interface

Quick learning to work with the system: a week to master all technical capabilities

Attentive support service

Always in touch with you, in chat or by phone, ready to solve problems

Telemedicine

Use of modern technologies for communication between the patient and the doctor

Use of AI

Application of Deep Learning technologies for comfortable work of the doctor

Security and transparency

Open source code is tested by many developers who fix possible bugs
03 Finance 🪙

Software as a service

- Charging for the tooling and platform to consume the software as a service via subscription

Custom development

- Creation of an information environment for the needs of a specific client
Voluntary donations
